

CHEMICAL AND PHYSICAL CHANGES QUIZ

CHEMICAL AND PHYSICAL CHANGES QUIZ IS AN ESSENTIAL TOOL FOR EDUCATORS AND STUDENTS ALIKE TO SOLIDIFY UNDERSTANDING OF FUNDAMENTAL SCIENTIFIC CONCEPTS. THIS ARTICLE DELVES DEEP INTO THE NUANCES OF DISTINGUISHING BETWEEN THESE TWO CRITICAL TYPES OF TRANSFORMATIONS, PROVIDING COMPREHENSIVE EXPLANATIONS AND ILLUSTRATIVE EXAMPLES. WE WILL EXPLORE THE CORE PRINCIPLES THAT DEFINE CHEMICAL AND PHYSICAL CHANGES, DISCUSS COMMON MISCONCEPTIONS, AND OFFER PRACTICAL ADVICE FOR IDENTIFYING EACH. FURTHERMORE, THIS GUIDE PREPARES YOU FOR ASSESSING YOUR KNOWLEDGE, ENSURING YOU CAN CONFIDENTLY DIFFERENTIATE BETWEEN THE FORMATION OF NEW SUBSTANCES AND ALTERATIONS IN FORM OR APPEARANCE. BY THE END, YOU WILL BE WELL-EQUIPPED TO TACKLE ANY ASSESSMENT ON THIS VITAL SCIENTIFIC TOPIC.

- UNDERSTANDING CHEMICAL VS. PHYSICAL CHANGES

- REINFORCING YOUR KNOWLEDGE

THE FUNDAMENTAL DISTINCTION: CHEMICAL AND PHYSICAL CHANGES EXPLAINED

AT THE HEART OF CHEMISTRY LIES THE CONCEPT OF CHANGE. MATTER IS NOT STATIC; IT CONSTANTLY UNDERGOES TRANSFORMATIONS. UNDERSTANDING THESE TRANSFORMATIONS IS CRUCIAL FOR COMPREHENDING THE BEHAVIOR OF SUBSTANCES AND PREDICTING THE OUTCOMES OF REACTIONS. BROADLY, THESE CHANGES ARE CATEGORIZED INTO TWO MAIN TYPES: PHYSICAL CHANGES AND CHEMICAL CHANGES. THE KEY DIFFERENCE LIES IN WHETHER THE FUNDAMENTAL IDENTITY OF THE SUBSTANCE IS ALTERED.

A PHYSICAL CHANGE AFFECTS THE FORM OR APPEARANCE OF A SUBSTANCE BUT DOES NOT CHANGE ITS CHEMICAL COMPOSITION. THINK OF IT AS REARRANGING THE BUILDING BLOCKS WITHOUT ALTERING THE BLOCKS THEMSELVES. THE SUBSTANCE REMAINS THE SAME, JUST IN A DIFFERENT STATE OR FORM. IN CONTRAST, A CHEMICAL CHANGE, ALSO KNOWN AS A CHEMICAL REACTION, RESULTS IN THE FORMATION OF ONE OR MORE NEW SUBSTANCES WITH ENTIRELY DIFFERENT PROPERTIES THAN THE ORIGINAL REACTANTS. THIS INVOLVES THE BREAKING AND FORMING OF CHEMICAL BONDS, FUNDAMENTALLY ALTERING THE MOLECULAR STRUCTURE.

DEFINING PHYSICAL CHANGES: ALTERATIONS IN FORM, NOT SUBSTANCE

PHYSICAL CHANGES ARE CHARACTERIZED BY A MODIFICATION IN THE PHYSICAL PROPERTIES OF A SUBSTANCE, SUCH AS ITS STATE, SHAPE, SIZE, OR TEXTURE, WITHOUT CHANGING ITS CHEMICAL MAKEUP. THE MOLECULES THEMSELVES REMAIN INTACT. FOR INSTANCE, WHEN WATER FREEZES INTO ICE, IT CHANGES FROM A LIQUID TO A SOLID, A DISTINCT PHYSICAL TRANSFORMATION. HOWEVER, THE SUBSTANCE IS STILL H_2O . SIMILARLY, WHEN SUGAR DISSOLVES IN WATER, IT APPEARS TO DISAPPEAR, BUT THE SUGAR MOLECULES ARE MERELY DISPERSED THROUGHOUT THE WATER, AND THEY CAN BE RECOVERED BY EVAPORATING THE WATER. THESE CHANGES ARE TYPICALLY REVERSIBLE.

COMMON EXAMPLES OF PHYSICAL CHANGES INCLUDE:

- MELTING ICE INTO WATER
- BOILING WATER INTO STEAM
- CUTTING PAPER INTO SMALLER PIECES
- DISSOLVING SALT IN WATER
- CRUSHING A CAN
- BENDING A METAL WIRE
- SHREDDING DOCUMENTS
- MIXING SAND AND WATER

IN ALL THESE SCENARIOS, THE CHEMICAL IDENTITY OF THE SUBSTANCE REMAINS UNCHANGED. THE WATER MOLECULES IN ICE, LIQUID WATER, AND STEAM ARE IDENTICAL. THE PAPER MOLECULES ARE STILL PAPER MOLECULES, JUST IN SMALLER FRAGMENTS. THE FUNDAMENTAL BUILDING BLOCKS OF THE MATTER HAVE NOT BEEN REARRANGED TO FORM NEW COMPOUNDS.

IDENTIFYING CHEMICAL CHANGES: THE EVIDENCE OF NEW SUBSTANCES

CHEMICAL CHANGES INVOLVE A REARRANGEMENT OF ATOMS AND THE FORMATION OF NEW CHEMICAL BONDS, LEADING TO THE CREATION OF SUBSTANCES WITH NEW AND DISTINCT PROPERTIES. THIS PROCESS IS OFTEN ACCOMPANIED BY OBSERVABLE INDICATORS THAT SIGNAL A CHEMICAL REACTION HAS OCCURRED. THESE INDICATORS ARE CRUCIAL FOR DISTINGUISHING CHEMICAL TRANSFORMATIONS FROM MERE PHYSICAL ALTERATIONS. THE ORIGINAL SUBSTANCES ARE CONSUMED, AND NEW SUBSTANCES ARE PRODUCED.

THE MOST COMMON SIGNS OF A CHEMICAL CHANGE INCLUDE:

- **PRODUCTION OF HEAT OR LIGHT:** MANY CHEMICAL REACTIONS RELEASE OR ABSORB ENERGY, OFTEN OBSERVED AS A TEMPERATURE CHANGE OR THE EMISSION OF LIGHT. FOR EXAMPLE, BURNING WOOD PRODUCES HEAT AND LIGHT.
- **FORMATION OF A GAS:** THE RELEASE OF BUBBLES, INDICATING THE FORMATION OF A GAS, IS A STRONG INDICATOR OF A CHEMICAL REACTION. THINK OF BAKING SODA REACTING WITH VINEGAR TO PRODUCE CARBON DIOXIDE GAS.
- **FORMATION OF A PRECIPITATE:** WHEN TWO SOLUTIONS ARE MIXED AND A SOLID FORMS, THIS SOLID IS CALLED A PRECIPITATE. ITS FORMATION SIGNIFIES A CHEMICAL REACTION. FOR INSTANCE, MIXING SILVER NITRATE AND SODIUM CHLORIDE SOLUTIONS YIELDS A WHITE PRECIPITATE OF SILVER CHLORIDE.
- **CHANGE IN COLOR:** A DISTINCT AND OFTEN PERMANENT COLOR CHANGE CAN INDICATE THAT A NEW SUBSTANCE HAS BEEN FORMED. RUSTING OF IRON, WHICH TURNS REDDISH-BROWN, IS A CLASSIC EXAMPLE.
- **CHANGE IN ODOR:** THE PRODUCTION OF A NEW SMELL IS OFTEN A SIGN THAT NEW CHEMICAL COMPOUNDS HAVE BEEN CREATED. FOR EXAMPLE, THE SMELL OF ROTTEN EGGS INDICATES THE FORMATION OF HYDROGEN SULFIDE.

IT IS IMPORTANT TO NOTE THAT WHILE THESE INDICATORS ARE STRONG CLUES, THEY ARE NOT ALWAYS DEFINITIVE ON THEIR OWN. FOR INSTANCE, BOILING WATER PRODUCES STEAM, WHICH IS A GAS, BUT THIS IS A PHYSICAL CHANGE. THEREFORE, CONSIDERING THE OVERALL CONTEXT AND THE POSSIBILITY OF NEW SUBSTANCE FORMATION IS ESSENTIAL.

PUTTING KNOWLEDGE TO THE TEST: EXAMPLES AND SCENARIOS

TO TRULY MASTER THE CONCEPTS OF CHEMICAL AND PHYSICAL CHANGES, APPLYING THE LEARNED PRINCIPLES TO VARIOUS SCENARIOS IS INDISPENSABLE. THIS SECTION PRESENTS A SERIES OF COMMON EXAMPLES THAT REQUIRE CAREFUL ANALYSIS TO DETERMINE WHETHER A PHYSICAL OR CHEMICAL TRANSFORMATION IS OCCURRING. BY WORKING THROUGH THESE EXAMPLES, YOU WILL SHARPEN YOUR ABILITY TO RECOGNIZE THE SUBTLE DIFFERENCES AND DEFINITIVE SIGNS OF EACH TYPE OF CHANGE.

ILLUSTRATIVE EXAMPLES OF PHYSICAL CHANGES

CONSIDER THE PROCESS OF MAKING A SANDWICH. WHEN YOU SLICE BREAD, YOU ARE PERFORMING A PHYSICAL CHANGE. THE BREAD IS NOW IN SMALLER PIECES, BUT IT IS STILL BREAD. SIMILARLY, SPREADING BUTTER ON THE BREAD IS A PHYSICAL CHANGE; YOU ARE ALTERING ITS DISTRIBUTION AND FORM, BUT THE BUTTER REMAINS BUTTER, AND THE BREAD REMAINS BREAD. WHEN YOU POUR MILK INTO YOUR COFFEE, THIS IS ALSO A PHYSICAL CHANGE. THE MILK AND COFFEE MIX, BUT NO NEW SUBSTANCE IS FORMED. IF YOU WERE TO HEAT THE COFFEE, YOU MIGHT SEE STEAM, WHICH IS WATER VAPOR, AGAIN A PHYSICAL CHANGE. THESE ARE ALL EXAMPLES WHERE THE INTRINSIC CHEMICAL NATURE OF THE MATERIALS REMAINS UNCHANGED.

ILLUSTRATIVE EXAMPLES OF CHEMICAL CHANGES

CONTRAST THE SANDWICH-MAKING WITH A CHEMICAL REACTION. IF YOU WERE TO BURN THE BREAD, THAT WOULD BE A CHEMICAL CHANGE. THE BREAD TURNS INTO ASH, PRODUCING HEAT, LIGHT, AND NEW GASES WITH A DISTINCT SMOKY ODOR, ALL CLEAR INDICATORS OF A CHEMICAL REACTION. SIMILARLY, IF YOU WERE TO BAKE THE BREAD FROM RAW INGREDIENTS LIKE FLOUR, WATER, AND YEAST, THE BAKING PROCESS INVOLVES NUMEROUS CHEMICAL CHANGES. HEAT CAUSES COMPLEX REACTIONS BETWEEN THE INGREDIENTS, ALTERING THEIR CHEMICAL COMPOSITION AND FORMING ENTIRELY NEW COMPOUNDS RESPONSIBLE FOR THE BREAD'S TEXTURE, FLAVOR, AND AROMA. ANOTHER COMMON EXAMPLE IS THE RUSTING OF IRON. IRON REACTS WITH OXYGEN IN THE PRESENCE OF WATER TO FORM IRON OXIDE (RUST), A SUBSTANCE WITH ENTIRELY DIFFERENT PROPERTIES THAN IRON ITSELF, EVIDENCED BY THE COLOR CHANGE AND THE FLAKING NATURE OF RUST.

DISTINGUISHING COMPLEX SCENARIOS

SOMETIMES, THE DISTINCTION CAN BE LESS STRAIGHTFORWARD. FOR INSTANCE, CONSIDER BURNING A CANDLE. THE MELTING OF THE WAX IS A PHYSICAL CHANGE, AS THE WAX IS SIMPLY CHANGING STATE FROM SOLID TO LIQUID. HOWEVER, THE BURNING OF THE WICK AND THE WAX IS A CHEMICAL CHANGE. IT PRODUCES HEAT, LIGHT, SMOKE (WHICH CONTAINS NEW SUBSTANCES), AND CARBON DIOXIDE AND WATER VAPOR. THUS, A SINGLE EVENT CAN INVOLVE BOTH TYPES OF CHANGES. WHEN EVALUATING A SITUATION, IT'S CRUCIAL TO IDENTIFY ALL TRANSFORMATIONS OCCURRING AND DETERMINE IF ANY RESULT IN THE FORMATION OF NEW CHEMICAL SUBSTANCES.

NAVIGATING THE NUANCES: COMMON PITFALLS IN IDENTIFYING CHANGES

DESPITE THE CLEAR DEFINITIONS, STUDENTS AND EVEN SEASONED OBSERVERS CAN SOMETIMES MISCLASSIFY CHEMICAL AND PHYSICAL CHANGES. THESE ERRORS OFTEN STEM FROM OVEREMPHASIZING A SINGLE INDICATOR OR OVERLOOKING THE FUNDAMENTAL CRITERION: THE FORMATION OF NEW SUBSTANCES. A THOROUGH UNDERSTANDING REQUIRES CONSIDERING ALL EVIDENCE AND THE UNDERLYING MOLECULAR PROCESSES.

THE MISCONCEPTION OF REVERSIBILITY

ONE COMMON PITFALL IS ASSUMING THAT IF A CHANGE IS REVERSIBLE, IT MUST BE PHYSICAL. WHILE MANY PHYSICAL CHANGES ARE EASILY REVERSIBLE (E.G., MELTING ICE CAN BE REFROZEN), NOT ALL REVERSIBLE CHANGES ARE PHYSICAL. FOR EXAMPLE, THE REACTION BETWEEN IRON AND SULFUR IS A CHEMICAL CHANGE THAT PRODUCES IRON SULFIDE. THIS PROCESS CAN BE REVERSED UNDER SPECIFIC CONDITIONS, BUT THE FORMATION OF IRON SULFIDE IS UNDENIABLY A CHEMICAL TRANSFORMATION. CONVERSELY, SOME PHYSICAL CHANGES ARE DIFFICULT TO REVERSE, SUCH AS SHREDDING PAPER OR BREAKING GLASS. THEREFORE, REVERSIBILITY IS A HELPFUL CLUE BUT NOT A DEFINITIVE RULE.

OVERRELIANCE ON SINGLE INDICATORS

AS MENTIONED EARLIER, RELYING SOLELY ON ONE OBSERVABLE SIGN CAN LEAD TO ERRORS. THE FORMATION OF A GAS, FOR INSTANCE, CAN OCCUR IN PHYSICAL CHANGES LIKE BOILING. SIMILARLY, A CHANGE IN TEMPERATURE CAN BE DUE TO DISSOLVING SOME SALTS IN WATER (PHYSICAL) OR A CHEMICAL REACTION. THE KEY IS TO ASK: "ARE NEW SUBSTANCES BEING FORMED?" IF THE ANSWER IS YES, IT'S A CHEMICAL CHANGE. IF THE ANSWER IS NO, AND THE CHANGE IS ONLY IN FORM OR STATE, IT'S A PHYSICAL CHANGE.

FOCUSING ON ENERGY CHANGES ALONE

WHILE ENERGY CHANGES OFTEN ACCOMPANY CHEMICAL REACTIONS, THEY ARE NOT EXCLUSIVE TO THEM. HEATING OR COOLING SOMETHING TYPICALLY INVOLVES ENERGY TRANSFER, BUT IF NO NEW SUBSTANCE IS FORMED, IT'S A PHYSICAL CHANGE. FOR INSTANCE, HEATING WATER TO BOILING INVOLVES SIGNIFICANT ENERGY INPUT, BUT IT'S STILL A PHYSICAL CHANGE FROM LIQUID TO GAS. THE CRITICAL DIFFERENTIATOR IS ALWAYS THE CREATION OF NOVEL CHEMICAL ENTITIES.

MASTERING THE MATERIAL: PREPARING FOR A CHEMICAL AND PHYSICAL CHANGES QUIZ

SUCCESSFULLY NAVIGATING A QUIZ ON CHEMICAL AND PHYSICAL CHANGES REQUIRES MORE THAN JUST MEMORIZATION; IT DEMANDS A DEEP CONCEPTUAL UNDERSTANDING AND THE ABILITY TO APPLY LEARNED PRINCIPLES. THIS SECTION PROVIDES ACTIONABLE STRATEGIES TO ENHANCE YOUR PREPARATION AND BUILD CONFIDENCE FOR ANY ASSESSMENT ON THIS TOPIC.

ACTIVE RECALL AND PRACTICE PROBLEMS

THE MOST EFFECTIVE WAY TO PREPARE IS THROUGH ACTIVE RECALL. INSTEAD OF PASSIVELY REREADING NOTES, TRY TO EXPLAIN THE CONCEPTS IN YOUR OWN WORDS. WORK THROUGH AS MANY PRACTICE PROBLEMS AS POSSIBLE. MANY TEXTBOOKS AND ONLINE RESOURCES OFFER A WEALTH OF EXERCISES DESIGNED TO TEST YOUR ABILITY TO DIFFERENTIATE BETWEEN PHYSICAL AND CHEMICAL CHANGES IN VARIOUS CONTEXTS. FOCUS ON UNDERSTANDING WHY A CHANGE IS CLASSIFIED AS IT IS, RATHER THAN JUST MEMORIZING ANSWERS.

CREATING YOUR OWN EXAMPLES

CHALLENGE YOURSELF TO IDENTIFY AND CATEGORIZE CHANGES HAPPENING AROUND YOU DAILY. THINK ABOUT COOKING, GARDENING, OR SIMPLE HOUSEHOLD CHORES. CAN YOU IDENTIFY A PHYSICAL CHANGE? WHAT ABOUT A CHEMICAL CHANGE? DOCUMENTING THESE OBSERVATIONS AND EXPLAINING YOUR REASONING CAN SIGNIFICANTLY SOLIDIFY YOUR UNDERSTANDING. FOR EXAMPLE, OBSERVING THE CONDENSATION OF WATER ON A COLD GLASS IS A PHYSICAL CHANGE (GAS TO LIQUID), WHILE THE BROWNING OF A SLICED APPLE IS A CHEMICAL CHANGE (OXIDATION). THIS PRACTICAL APPLICATION BRIDGES THE GAP BETWEEN THEORETICAL KNOWLEDGE AND REAL-WORLD PHENOMENA.

USING VISUAL AIDS AND ANALOGIES

SOMETIMES, VISUALIZING THE MOLECULAR LEVEL CAN BE HELPFUL. FOR PHYSICAL CHANGES, IMAGINE MOLECULES SIMPLY MOVING APART OR CLOSER TOGETHER, OR CHANGING THEIR ARRANGEMENT, BUT REMAINING THE SAME TYPE OF MOLECULE. FOR CHEMICAL CHANGES, ENVISION ATOMS BEING REARRANGED TO FORM ENTIRELY NEW MOLECULAR STRUCTURES. ANALOGIES CAN ALSO BE POWERFUL. THINK OF A LEGO SET: REARRANGING LEGO BRICKS INTO A DIFFERENT SHAPE IS LIKE A PHYSICAL CHANGE. TAKING THE BRICKS APART AND USING THEM TO BUILD SOMETHING COMPLETELY NEW, PERHAPS WITH DIFFERENT COLORS OR TYPES OF BRICKS, IS AKIN TO A CHEMICAL CHANGE.

REVIEWING KEY DEFINITIONS AND INDICATORS

BEFORE AN ASSESSMENT, TAKE TIME TO REVIEW THE CORE DEFINITIONS OF PHYSICAL AND CHEMICAL CHANGES. REVISIT THE LIST OF COMMON INDICATORS FOR CHEMICAL CHANGES (HEAT/LIGHT PRODUCTION, GAS FORMATION, PRECIPITATE FORMATION, COLOR CHANGE, ODOR CHANGE). ENSURE YOU UNDERSTAND THE CAVEATS ASSOCIATED WITH EACH INDICATOR AND THE OVERARCHING PRINCIPLE OF NEW SUBSTANCE FORMATION.

REINFORCING YOUR UNDERSTANDING OF MATTER TRANSFORMATIONS

THE ABILITY TO DISCERN BETWEEN CHEMICAL AND PHYSICAL CHANGES IS FUNDAMENTAL TO GRASPING BROADER SCIENTIFIC PRINCIPLES. IT'S A CONCEPT THAT UNDERPINS MUCH OF OUR UNDERSTANDING OF THE NATURAL WORLD, FROM THE PROCESSES WITHIN OUR OWN BODIES TO THE VAST REACTIONS OCCURRING IN THE UNIVERSE. BY CONSISTENTLY ENGAGING WITH THESE CONCEPTS, PRACTICING IDENTIFICATION, AND UNDERSTANDING THE UNDERLYING REASONS FOR CLASSIFICATION, YOU BUILD A ROBUST FOUNDATION IN CHEMISTRY. THIS KNOWLEDGE WILL NOT ONLY SERVE YOU WELL IN ACADEMIC SETTINGS BUT ALSO ENHANCE YOUR APPRECIATION FOR THE DYNAMIC NATURE OF MATTER ALL AROUND US.

FREQUENTLY ASKED QUESTIONS ABOUT CHEMICAL AND PHYSICAL CHANGES QUIZ

Q: WHAT IS THE PRIMARY DIFFERENCE BETWEEN A CHEMICAL CHANGE AND A PHYSICAL CHANGE?

A: THE PRIMARY DIFFERENCE LIES IN WHETHER NEW SUBSTANCES ARE FORMED. A PHYSICAL CHANGE ALTERS THE FORM OR APPEARANCE OF A SUBSTANCE BUT NOT ITS CHEMICAL IDENTITY. A CHEMICAL CHANGE RESULTS IN THE CREATION OF ONE OR MORE NEW SUBSTANCES WITH DIFFERENT CHEMICAL PROPERTIES.

Q: CAN A CHANGE BE BOTH CHEMICAL AND PHYSICAL?

A: YES, A SINGLE EVENT CAN INVOLVE BOTH TYPES OF CHANGES. FOR EXAMPLE, WHEN A CANDLE BURNS, THE MELTING OF THE WAX IS A PHYSICAL CHANGE, WHILE THE BURNING OF THE WICK AND WAX IS A CHEMICAL CHANGE.

Q: WHAT ARE SOME COMMON INDICATORS THAT A CHEMICAL CHANGE HAS OCCURRED?

A: COMMON INDICATORS INCLUDE THE PRODUCTION OF HEAT OR LIGHT, THE FORMATION OF A GAS (BUBBLES), THE FORMATION OF A PRECIPITATE (A SOLID FORMING FROM A SOLUTION), A CHANGE IN COLOR, AND A CHANGE IN ODOR.

Q: IS DISSOLVING SUGAR IN WATER A CHEMICAL OR PHYSICAL CHANGE?

A: DISSOLVING SUGAR IN WATER IS A PHYSICAL CHANGE. THE SUGAR MOLECULES ARE DISPERSED IN THE WATER BUT REMAIN CHEMICALLY UNCHANGED, AND THE SUGAR CAN BE RECOVERED BY EVAPORATING THE WATER.

Q: WHAT ABOUT CUTTING PAPER? IS THAT A CHEMICAL OR PHYSICAL CHANGE?

A: CUTTING PAPER IS A PHYSICAL CHANGE. THE PAPER IS DIVIDED INTO SMALLER PIECES, BUT ITS CHEMICAL COMPOSITION REMAINS THE SAME; IT IS STILL PAPER.

Q: HOW CAN I BEST PREPARE FOR A CHEMICAL AND PHYSICAL CHANGES QUIZ?

A: TO BEST PREPARE, ACTIVELY RECALL THE DEFINITIONS AND INDICATORS, WORK THROUGH NUMEROUS PRACTICE PROBLEMS, TRY TO IDENTIFY CHANGES IN YOUR DAILY LIFE, AND UNDERSTAND WHY EACH CHANGE IS CLASSIFIED AS IT IS.

Q: WHAT HAPPENS AT THE MOLECULAR LEVEL DURING A PHYSICAL CHANGE?

A: AT THE MOLECULAR LEVEL, DURING A PHYSICAL CHANGE, THE MOLECULES THEMSELVES REMAIN THE SAME. THEIR ARRANGEMENT, SPACING, OR ENERGY STATE MIGHT CHANGE, LEADING TO A DIFFERENT STATE (SOLID, LIQUID, GAS) OR FORM, BUT THE ATOMS WITHIN THE MOLECULES ARE NOT REARRANGED TO FORM NEW CHEMICAL BONDS.

Q: WHAT HAPPENS AT THE MOLECULAR LEVEL DURING A CHEMICAL CHANGE?

A: DURING A CHEMICAL CHANGE, ATOMS ARE REARRANGED, AND CHEMICAL BONDS ARE BROKEN AND FORMED, RESULTING IN THE CREATION OF NEW MOLECULES AND COMPOUNDS. THE ORIGINAL REACTANTS ARE TRANSFORMED INTO ENTIRELY NEW SUBSTANCES WITH DIFFERENT MOLECULAR STRUCTURES AND PROPERTIES.
