## What Aristotle Meant by Courage

For Aristotle, courage wasn't merely an emotional response; it was a character trait, a disposition developed through habit and practice. He defined it as the virtue that deals with the emotion of fear and the experience of confidence. It's not about being fearless, a state that Aristotle considered more akin to recklessness or even a lack of proper appreciation for danger. Instead, true courage involves experiencing fear but acting rightly in the face of it, guided by reason and a commitment to what is honorable and good.

This intellectual component is crucial. Courage isn't an instinctive, unthinking leap into danger. It requires a rational assessment of the situation, an understanding of what is truly worth facing peril for, and a deliberate choice to act. It's about finding the right balance, the golden mean, in our response to threatening circumstances.

## Courage as a Mean: The Extremes of Deficiency and Excess

Aristotle's ethical system famously centers on the doctrine of the mean, and courage is a prime example of this principle in action. He identified two vices that represent the extremes of courage: cowardice (deficiency) and rashness or recklessness (excess). Cowardice is characterized by an excessive amount of fear and a deficiency of confidence, leading individuals to shrink from dangers that they ought to face. They are overcome by their fears and fail to act virtuously.

On the other hand, rashness is marked by an insufficient amount of fear and an excessive amount of confidence. The rash individual rushes into dangerous situations without proper consideration or regard for the consequences, often acting impulsively and without the guidance of reason. They might appear brave, but their actions stem from a miscalculation of risk or an ignorance of true danger, rather than a virtuous disposition.

## **Cowardice: The Deficiency of Fear**

Cowardice, in Aristotle's view, is a failure of character. It's the state of being overcome by fear to such an extent that one cannot perform their duties or pursue what is good and noble. A coward perceives danger more vividly and feels it more intensely than is appropriate, leading them to withdraw or act shamefully when faced with a threat. This deficiency prevents them from experiencing the fullness of a virtuous life, as it limits their capacity for action and engagement with the world.

## **Rashness: The Excess of Confidence**

Rashness, while sometimes mistaken for courage, is equally a vice. The rash person experiences too little fear, or perhaps misapprehends the nature of the danger, leading them to act with undue boldness. They may charge into battle without understanding the strategic situation or underestimate the severity of a threat. Their actions might be brave in appearance, but they lack the reasoned judgment and proper emotional calibration that define true courage. This excess can lead to unnecessary harm and ultimately undermines the pursuit of the good.

## **The Object of Courage: Facing Fearful Things**

Aristotle clarifies that courage is specifically concerned with facing certain kinds of things. It's not about facing every perceived threat. The truly courageous person faces those things that are fearful and worthy of fear, and they do so in the right way and for the right reasons. These are typically dangers that threaten life, limb, or other significant aspects of well-being, but they are also situations where acting bravely is the noble and right course of action.

Consider the soldier on the battlefield. The dangers of war are undeniable. Courage here involves facing

these dangers not out of recklessness, but because there is a just cause or a duty to uphold. The courageous soldier understands the risks but prioritizes the good for which they are fighting, exhibiting a rational and resolute spirit.

## The Motive for Courage: The Noble End

A critical element of Aristotelian courage is its motivation. True courage is not exercised for personal gain, for the sake of appearing brave, or out of a desire for revenge. Instead, it is undertaken for the sake of the noble, or *kalon*. This concept of the noble encompasses what is beautiful, honorable, and intrinsically good. The courageous person acts because the action itself is fitting and morally right, aligned with the highest human excellences.

For example, a firefighter running into a burning building to save a life is acting courageously. Their motive is not fame or fortune, but the noble act of preserving human life, which is intrinsically valuable. This focus on the noble end distinguishes genuine virtue from actions motivated by external rewards or base desires.

## Distinguishing True Courage from Similar Dispositions

Aristotle was meticulous in distinguishing true courage from other states that might superficially resemble it. This includes the courage of experience, the courage of spirit, the courage of ignorance, and the courage of hope.

- **Courage of Experience:** Those who have experienced many dangers may seem brave because they have a better grasp of what is truly dangerous and what is not. However, this is more about familiarity than a virtue.
- **Courage of Spirit:** Some people, driven by passion or a fiery temperament, may act boldly. This is akin to a feverish excitement rather than reasoned bravery.
- **Courage of Ignorance:** This is the bravery of those who are unaware of the true extent of the danger they face. Once they realize the peril, their bravery often evaporates.
- **Courage of Hope:** Individuals who are confident in their ability to escape danger, even if it's unlikely, might appear courageous. This is more about optimism than virtue.

Aristotle emphasizes that true courage arises from a correct estimation of dangers and a firm commitment to the noble end, independent of these less virtuous motivations.

## **The Role of Courage in Character Development**

Developing courage is not a passive process; it requires active engagement and deliberate practice. Like any virtue, it is acquired through habituation. We become courageous by repeatedly performing courageous acts. This doesn't mean seeking out danger, but rather facing the necessary challenges and fears that arise in life with the right disposition.

Through consistent practice, the inclination to act courageously becomes ingrained in our character. We develop a stable disposition where acting bravely feels natural, not a strenuous effort. This gradual development is essential for becoming a person of excellent character, capable of navigating life's complexities with integrity and resilience.

## **Practical Manifestations of Aristotelian Courage**

The concept of Aristotelian courage extends beyond the battlefield or extreme peril. It manifests in various aspects of life where one must confront discomfort, potential social disapproval, or personal risk for the sake of what is right. This could involve speaking truth to power, standing up for a friend, pursuing a difficult but important goal, or making a significant sacrifice for a greater good.

For instance, a student might feel nervous about presenting a controversial but well-researched argument in class. True courage here would be to deliver the presentation with conviction, knowing the potential for disagreement, because they believe in the merit of their ideas and the importance of intellectual honesty. Similarly, an entrepreneur facing financial risks to launch a business that will create jobs demonstrates courage, driven by a vision and a belief in their endeavor's positive impact.

## **The Importance of Courage in a Flourishing Life**

Ultimately, courage is indispensable for achieving a flourishing life, or eudaimonia. Without courage, individuals are limited by their fears and anxieties, unable to pursue their goals, uphold their values, or contribute fully to society. It's the virtue that enables us to confront obstacles, take necessary risks, and act in accordance with our highest principles, even when it's difficult.

Courage empowers us to live authentically and purposefully. It allows us to step outside our comfort zones, to embrace challenges as opportunities for growth, and to engage with the world in a meaningful way. By cultivating courage, we not only strengthen our own character but also enhance our capacity to live a life

that is both virtuous and fulfilling, a life worthy of admiration and conducive to genuine happiness.

## **FAQ**
